Purpose

- Goal: To create a **remote working service for new equal society** in order to enhance gender equality amongst remote worker community in the all work domain
- Why? **remote working** of male and female parental leave workers is increasing, but **services to manage and supervise** them are inconvenient.

Solution and Stakeholder Summary

- Users: **employers** of a company that employs **remote working** who concerned about the decline in **profits** from remote working.
- The solution will make it easier for **office workers, parents** who choose to work from home because they have to take care of their **children**.
- Potential Partnerships: **Location Service Providers**

Technical Approach and Intended Solution Impact

- Proposed Technologies: Technology that makes **access to corporate networks more secure**, Technology that provide a **worker location**
- For that, Data Encryption Standard(**DES**): , and **GPS** Technology are used.
- Intended Impacts of Solution: the **convenience** of **remote worker**, and the **relief** of **employers'** anxiety

From Concept to Execution

- Risks and Ethical Considerations: excessive invasion of **privacy**
- Product: **Application** and **web service** that applied our solution
- Industry Standards and Policy Considerations: To provide this service, we need to obtain **consent** about getting user **location information**
- Operational Assumptions: the expansion of the **remote working market**
